

DISC Stakka®

“Disc Stakka is so easy to use and will eliminate any mislabelled CDs. Potential productivity savings are enormous.”

**Stan Vandermerwe,
Senior Designer,
Hosico Engineering**

Disc Management Saves Hosico Big Bucks

When a new product provides a low-cost solution to a problem that is costing hours and hours of lost productivity, any business would have to seriously consider it.

For machining, tooling and moulding company **Hosico Engineering** in Melbourne Australia, it recently took a week to find an archived job from seven years ago. Today, with its newly installed Imation Disc Stakka, it only takes a few seconds to find CDs stored on the system. The Disc Stakka CD & DVD Manager is a revolutionary solution that protects and manages both CDs and DVDs and the files and folders stored on them.

Hosico helps design and manufacture plastic moulded components for the automotive, biomedical, whitegoods

and a range of other industries. CDs that contain Computer Aided Design (CAD) technical drawings and specifications have become an integral part of Hosico's business. Where once engineering designs were on paper, everything is now handled and processed electronically.

Peter Hof, Hosico's managing director, admits that the way they used to archive past jobs was fairly archaic.

“We have a special area for archived material, but because we've been going 27 years, it's quite extensive. From the pre CD-burner era we have DAT tapes, and over the past few years we've built up quite a collection of CDs,” said Mr Hof.

“The CDs are stored in plastic wallets in lever-arch files and with an ever-growing collection, it is taking longer to find the required CD.

“Finding the right CD was totally reliant on it being labelled and indexed correctly before it was filed in the archives. Unfortunately, human error often meant mislabelled files, which down the track would mean hours of trying to find the right CD.”

No more missing or mislabelled discs

Stan Vandermerwe, senior designer in Hosico's CAD department, said the potential productivity savings are enormous, not just in searching for archived discs, but in labelling.

“It's so easy to use and will eliminate any mislabelled CDs because the OpdiTracker software that comes with the Disc Stakka does it all for you, capturing everything that's on the CD and storing it on the database,” said Mr Vandermerwe.

“To file and archive CDs, we just put a disc in the CD drive of the computer and all of the disc's file and folder names are captured automatically.

“When we come to search for data that is on the CD, we simply type in a key word and the system brings up a list of everything with that key word in its title. We then select the file we want, double click it, and out pops the CD from the Disc Stakka. It works beautifully.

“With files getting larger and larger and paperwork becoming obsolete, keeping track of the data is becoming much more important. It is crucial that the data is kept in a secure environment and can be

accessed immediately.

“The Imation Disc Stakka and OpdiTracker software will help prevent lost and damaged discs and while it will increase our productivity, it will also eliminate the frustration in looking for misplaced and mislabelled discs,” he added.

- ▼ *Each compact Imation Disc Stakka unit holds up to one hundred 12 cm discs.*
- ▼ *The bundled OpdiTracker software automatically catalogues in its database the volume, file and folder names from computer-readable CDs and DVDs.*
- ▼ *Search by name or keyword to find any file, folder or disc within seconds, and then instantly eject the required disc.*
- ▼ *Single USB connection for both power and data.*
- ▼ *Stack units five high to store 500 discs without needing additional cables or desk space.*
