CD / DVD content management made easy

Are you tired of wasting time searching disc after disc to find the file, image or audio track you need?

Using **OpdiTracker**, you can search or browse your discs and their content “virtually online”. It takes just a few seconds to locate any disc or file that you need.

**Need a file?**  
OpdiTracker  
finds which disc  
you need in seconds!

# OpdiTracker takes the hard work out of keeping track of data and audio files stored on your CDs and DVDs.

OpdiTracker is a simple and intuitive application for managing your CDs and DVDs and the content stored on them. It runs in the background on your computer. Whenever OpdiTracker detects a new disc inserted into your CD or DVD drive, it automatically adds that disc's name and content to the OpdiTracker database.

Once stored in the database, your discs and content are available to be browsed "virtually online".

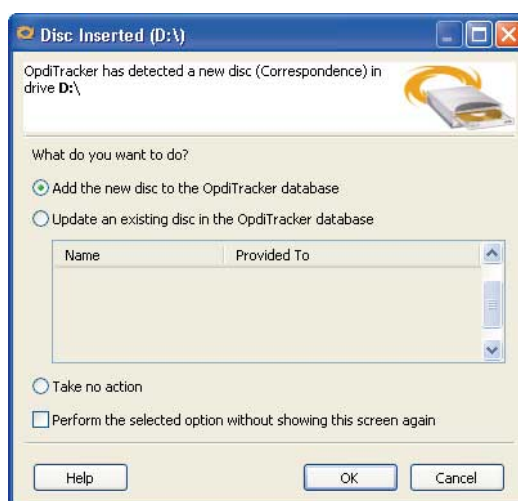

You can also take advantage of OpdiTracker's powerful search engine to locate any file or disc within seconds.

Perfect for any business or home struggling to manage a growing CD and DVD library, OpdiTracker provides a fast and effective content management solution that is easy to use.

## Save time

Build a database of your discs and their content as you use them.

Whenever you insert a new disc into your computer's CD or DVD drive, OpdiTracker can automatically recognize it and give you the option to add its name and content to the database.

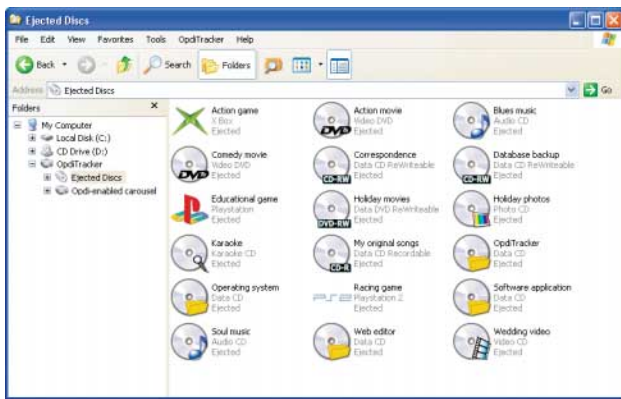

OpdiTracker captures the file structure (folder and file names) for data discs and downloads audio track details (including artist names and track titles) from the Internet for commercial music CDs. You can also use the Comments field to enter additional information such as keywords, software registration codes or the disc's location.

## Simple to use

**“Browse” to find the disc and file you need.**

OpdiTracker is integrated with Windows Explorer® to provide “virtually online” access to your discs and their content. You can browse your OpdiTracker database in the same way you would browse the files and folders stored on your computer. It also tells you which disc a file is stored on and where the disc is located (either its physical location or the name of the person who has it).

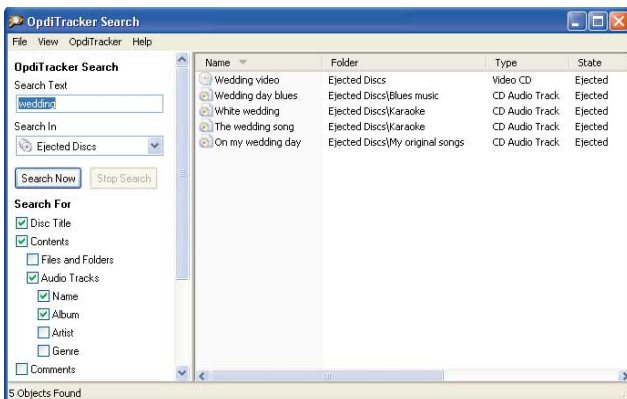

You can double-click a file to read that file. OpdiTracker prompts you to insert the disc that contains the file into your computer’s CD or DVD drive, and then opens the selected file. If the disc is in an Opdi-enabled carousel, OpdiTracker automatically ejects the disc.

## Hassle free

**Need a file? OpdiTracker finds which disc you need in seconds!**

Take advantage of OpdiTracker’s powerful search functionality to locate any disc or file within seconds. You can search the OpdiTracker database by disc name, file name, keyword, comments and more. After you locate a disc, you can edit its database details, remove it from the database, find its location, and eject it from an Opdi-enabled carousel (if it is currently stored there).

## Compatible

**OpdiTracker works with popular disc storage units.**

The power of OpdiTracker is fully deployed when teamed with a disc storage unit that incorporates Opdi technology, such as the Imation Disc Stakka. After cataloguing discs in the OpdiTracker database, you can store them in an Opdi-enabled carousel and let OpdiTracker worry about keeping track of where each disc is. While your discs are stored in an Opdi-enabled carousel, they are protected against loss and the damage that can be caused by improper handling and environmental factors such as dirt and UV. And when you need a disc again, a simple search will retrieve it in seconds. You can also use OpdiTracker to password protect Opdi-enabled carousels to stop unauthorized access or theft.

## Grows with you

**Upgrade to more advanced features as your disc library grows.**

Advanced users, and those with large disc libraries or multiple Opdi-enabled carousels, can upgrade to the “Pro” (Professional) edition of OpdiTracker for enhanced and additional features. These include additional database reports, enhanced security options, and a more fully-featured search.

With growing collections of CDs and DVDs in the office and home, it's not always easy to find the disc you need. Trying to find a specific file by searching disc after disc can be even harder. With OpdiTracker, you can find any disc or file you need in seconds!

**The OpdiTracker CD and DVD content management solution provides the following benefits:**

- OpdiTracker automatically creates a virtual file system of your CD and DVD content. There's no need to spend time and effort manually recording your discs' details and remembering to keep those details up to date.
- "Virtually online" access means that you can use Windows Explorer to browse your CDs and DVDs and their content in the same way as you browse folders and files stored on your computer's drives.
- In addition to being integrated with Windows Explorer, OpdiTracker uses wizards to automate common tasks. It's so simple to use that you will be cataloguing and managing your CD and DVD content in no time.
- Combine OpdiTracker with popular disc storage units such as the Imation Disc Stakka for a comprehensive disc and content management solution.
- OpdiTracker grows with you to help you control your growing disc library. Additional and enhanced functionality is available in the "Professional" upgrade.

**SYSTEM REQUIREMENTS**

- Windows XP, 2000 (SP4), Me, 98 SE
- Pentium II processor
- 32 MB RAM (64 MB RAM recommended)
- 200 MB free disk space
- CD or DVD drive for capturing data disc content

**WARRANTY**

- 90 days software repair or replacement warranty
